

## DEPARTMENT OF COMPUTER SCIENCE

### CSC2901 – Discrete Structures

#### Test I

Instructions : Answer ALL the questions

Duration : 2 Hours

1. Prove that
  - a. If the sum of two integers is even, so is their difference.
  - b. If  $a \equiv b \pmod{n}$  then  $ac \equiv bc \pmod{n}$ , for integers  $a, b, c$ , and  $n$
2.
  - a. For the pair of integers  $a$  and  $b$  below, find the numbers  $m$  and  $n$ , if possible, such that  $am + bn = 1$ .
    - i.  $a = 10, b = 7$
    - ii.  $a = 10, b = 8$
  - b. What condition should exist between  $a$  and  $b$ , for numbers  $m$  and  $n$  to be found such that  $am + bn = 1$ ?
  - c. Find the number  $s$  such that  $7s \equiv 1 \pmod{24}$
3. Ben intends to communicate with Ann securely using the RSA algorithm. So he picks the primes  $p = 13$  and  $q = 5$ 
  - a. What public key does he send to Ann?
  - b. Ben receives the message "F", encoded by Ann. What is the plaintext of this message?
4.
  - a. Define what an algorithm is.
  - b. Describe the three characteristics of algorithms.
  - c.
    - i. Write an non-recursive algorithm in pseudocode, which receives two positive integers  $m$  and  $n$ , and returns the greatest common divisor of  $m$  and  $n$ ,  $\gcd(m, n)$ .
    - ii. Draw the flowchart for your code above.
